

PRESS RELEASE

Systems Mechanics partner with new company Zenulta in delivering ground-breaking Enterprise Event Correlation technology to the market

Systems Mechanics brings telecoms system integration expertise to Zenulta's event correlation solution for telecommunications providers.

Nice, 22 May 2007 - Systems integrator, Systems Mechanics, has partnered with Zenulta as the new company launches its ground-breaking enterprise event correlation technology. Zenulta's new technology, targeted initially at the telecommunications industry, benefits from the expertise of Systems Mechanics as specialists in the field of telecommunications network and service management.

Zenulta's patent-pending "Proximity correlation" technology is a new approach to Enterprise Correlation that breaks down the barriers of incumbent technologies in this marketplace. It has initially been developed to enable telecoms businesses to maintain complex, multi-vendor, multi-platform networks and systems, ensuring smooth running and constant service delivery.

It correlates events at all levels - taking a series of independent notifications and using them to identify the 'Real Event' as quickly as possible in order to take the appropriate actions, so ensuring consistency of service, system performance and vastly reduced support costs.

Zenulta worked as Systems Mechanics' partner on a solution for Zenulta's launch customer TurkCell, Turkey's first and biggest GSM network provider. TurkCell operates one of the largest single mobile networks in Europe with 32 million subscribers, and wanted to put into place a solution that will optimise its network service performance. TurkCell's objective is to ensure its network operates consistently at full potential and delivers the best customer experience. The quick and effective monitoring of its voice and data network, and the management of performance data, is vital.

Aware of TurkCell's challenge and recognising the gap in the market filled by Zenulta's technology, Systems Mechanics proposed Zenulta's Enterprise Event Correlation solution to TurkCell and are integrating the solution into Turkcell's existing Network

Management environment using its CrossTalk™ OSS/J Foundation product. As Zenulta's first partner, Systems Mechanics, spent well over two years looking for a product to fill this gap. Zenulta's Proximity Correlation technology is now the accepted solution within the company's product portfolio.

"We place great value on excellence in the products we provide to our customers, with the highest levels of performance and uninterrupted service. Zenulta's Enterprise Event Correlation solution allows correlation scenarios to be defined through simple configuration, without the need for coding. Combined with the flexibility of our CrossTalk™ OSS/J Foundation this ensures a quick and successful delivery. Zenulta's product capability greatly simplified the implementation for both ourselves as the Systems Integrator and for the customer, in delivering the project goal of a 'time based event problem analysis' solution to enhance TurkCell customer experience." Said Rob Green, Chief Executive Officer of Systems Mechanics Ltd.

"Our innovative technology in enterprise event correlation, together with the specialist industry system integration skills of Systems Mechanics, is a winning combination for customers," said John Tucker, Chief Executive Officer of Zenulta Ltd.

About Systems Mechanics

Systems Mechanics are specialists in the field of Telecommunications Network and Service Management. Systems Mechanics provides a complete service to satisfy customer operational, business and technical needs-from initial concept through all stages of delivery to operational deployment. Systems Mechanics' markets its own CrossTalk™ Product Suite offering a wide range of solutions for enhanced fault management with HP OpenView TeMIP, encompassing many different aspects of functionality, ranging from mediation and framework enhancements, to dedicated off the shelf alarm processing and correlation applications.

Zenulta Ltd was founded in February 2006, bringing together experienced Network and Service Management knowledge and a genius approach to the existing issue of enterprise-wide event correlation.

Since then, a team of highly talented developers has been working to bring a new type of Enterprise Event Correlation machine to the market. The innovative product represents a paradigm shift in this arena - a new way of thinking about the issue.

The solution is being developed using Zenulta's innovative technology directly with a customer and a Systems Integrator. The commercial launch date for

the product - which also takes the company name Zenulta - is May 2007.

Zenulta Ltd is privately owned and has already attracted investment partners. The company is UK based operating from Brinkworth in Wiltshire. For further information visit: www.zenulta.com
